## **Summary**

The National Citizen Survey™ (The NCS™) is a collaborative effort between National Research Center, Inc. (NRC) and the International City/County Management Association (ICMA). The survey and its administration are standardized to assure high quality research methods and directly comparable results across The NCS communities. The NCS captures residents' opinions within the three pillars of a community (Community Characteristics, Governance and Participation) across eight central facets of community (Safety, Mobility, Natural Environment, Built Environment, Economy, Recreation and Wellness, Education and Enrichment and Community Engagement). This report summarizes Suwanee's performance in the eight facets of community livability with the "General" rating as a summary of results from the overarching questions not shown within any of the eight facets. The "Overall" represents the community pillar in its entirety (the eight facets and general).

By summarizing resident ratings across the eight facets and three pillars of a livable community, a picture of Suwanee's community livability emerges. Below, the color of each community facet summarizes how residents rated each of the pillars that support it – Community Characteristics, Governance and Participation. When most ratings were higher than the populations less than 40,000 benchmark, the color is the darkest shade; when most ratings were lower than the benchmark, the color is the lightest shade. A mix of ratings (higher and lower than the benchmark) results in a color between the extremes.

Broadly, most aspects of Community Characteristics, Governance and Participation received positive ratings. Community Characteristics saw exceptionally high ratings for Natural Environment, Built Environment, Economy, Recreation and Wellness, Education and Enrichment and Community Engagement. Within Governance, similarly high ratings were seen for Economy, Recreation and Wellness, Education and Enrichment and Community Engagement. Education and Enrichment and Recreation and Wellness also saw especially good ratings within Participation. Ratings within the pillars of Community Characteristics and Governance across most of the facets were stronger than were ratings of Participation. This information can be helpful in identifying the areas that merit more attention.
